S. Patent and Trademark Office TOL-326 (Rev. 04-01)	Office Action Su	ımmary		Part	of Paper No. 7

Serial No. 10/089,134

Art Unit 1711

Claim 14 is rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicants regard as the invention.

The term "in particular" renders the claims unclear since it cannot be determined the "particular" feature is necessarily present.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, 6-11, 14-24 and 26 are rejected under 35 U.S.C. § 102(b) as being anticipated by Hamashima et al. (JP 10245481).

Serial No. 10/089,134

Art Unit 1711

Hamashima et al. disclose a composition containing polycarbonate, thermoplastic polyesters and graft copolymers. Note the English language Abstract. Note paragraph 24 of the patent where it is disclosed that the polyester includes PEN, i.e. polyethylene naphthalate.

Claim 5 is rejected under 35 U.S.C. § 103(a) as being unpatentable over Hamashima et al., cited above.

Note the Abstract which discloses that the polyester may also include PET. Therefore, combinations of PET and PEN would have been obvious to a practitioner having ordinary skill in the art at the time of the invention in that patentees disclose that these polyesters may be used in identical roles and in the expectation of adequate results absent any showing of surprising or unexpected results.

Claims 1-4, 8-11, 13-24 and 26 are rejected under 35 U.S.C. § 102(b) as being anticipated by Ueno et al. (JP 49129748).

Ueno et al. disclose a molding composition containing polycarbonate and polytetramethylene naphthalene dicarboxylate.

Claims 1-12 and 14-26 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Katayama et al. (USP 6,316,579).

Katayama et al. disclose a composition containing polycarbonate, an organophosphate, and a thermoplastic resin. Note the Abstract in this regard.

Serial No. 10/089,134
Art Unit 1711

The thermoplastic resin may include naphthalate polyesters or PET at column 10 lines 6-19. The phosphates may include various phosphates such as triphenyl phosphate or various diphosphates at column 15 lines 1-28. Graft copolymers may be added at column 12 lines 54-60.

No specific examples of applicants' combination of materials are present but patentees clearly disclose that applicants' materials can be chosen from various components used in combination such that applicants' materials could be chosen in combination based on the disclosure of Katayama et al. Therefore it would have been obvious to a practitioner having ordinary skill in the art at the time of the invention to arrive at applicants' composition based on the disclosure of Katayama et al. in the expectation of adequate results absent any showing of surprising or unexpected results.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey Mullis whose telephone number is (703) 308-2820. The examiner can normally be reached on Monday-Friday from 9:30 to 6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck, can be reached on (703) 308-2462. The fax phone number for this Group is (703) 872-9306.

Serial No. 10/089,134

Art Unit 1711

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-2351.
